DEPARTMENT OF COMPUTER SCIENCE & ENGINEERING

Gyan Ganga College of Technology
Jabalpur, Madhya Pradesh

April 2019

PREFACE

Major Project is an integral part of B.E and each and every student has to create the Major Project in the 8th Semester while studying in Institute.

This record is concerned about our practical Major Project during 8th Semester i.e. final year of B.E. course. We have taken our Practical Major Project in **"Aplicar"** During this Major Project, we got to learn many new things about the technology and its practical implementation. This Major Project proved to be a milestone in our knowledge of present environment. Every say and every moment was an experience in itself, an experience which theoretical study can't provide.

ACKNOWLEDGEMENT

It is my pleasure to be indebted to various people, who directly or indirectly contributed in the development of this work and who influenced my thinking, behavior and acts during the course of study.

I express my sincere gratitude to our principal, ***Dr. Neeraj Shukla***, for providing me an opportunity to undergo Major Project in Aplicar.

I am thankful to "Prof. Saurabh Sharma" for his support, cooperation, and motivation provided to me during the Major Project for constant inspiration, presence and blessings. Also, I would like to mention my gratitude to the entire faculty of my department for their support and suggestions.

I also extend my sincere appreciation to ***"My Team"*** who provided his valuable suggestions and precious time in accomplishing my Major Project report.

Lastly, I would like to thank the almighty and my parents for their moral support and my friends with whom I shared my day-to day experience and received lots of suggestions that my quality of work.

Vivek Dubey – 0208CS151123
Yogita Sanodiya – 0208CS151126
Somansha Kewat – 0208CS151102
Shreya Saraiya – 0208CS151097

DECLARATION

I, Vivek Dubey**,** Roll No. 0208CS151123, B.E (Semester- VIII) of the **Gyan Ganga College of Technology, Jabalpur** hereby declare that the Major Project Report entitled **"Aplicar"** is an original work and data provided in the study is authentic to the best of my knowledge. This report has not been submitted to any other Institute for the award of any other degree.

Vivek Dubey
(Roll No. 0208CS151123**)**

Place: Jabalpur
Date: 20 April 2019

This is to certify that above statement made by the candidate is correct to the best of our knowledge.

Approved by:

Prof. Saurabh Sharma, **Project Coordinator,** **Assitant Professor,** **Department of CSE,** **GGCT,JABALPUR**	**Prof. Saurabh Sharma,** **Project Supervisor** **Assitant Professor,** **Department of CSE,** **GGCT,JABALPUR**	**Dr. Ajay Lala,** **Head of the Department** **Department of CSE,** **GGCT,JABALPUR**

GYAN GANGA COLLEGE OF TECHNOLOGY

1. Introduction

1.1 Problem Statement

Develop a web application for learning purpose which can provide small real world projects to the learners, where learners can act as a volunteer and use their skills to complete given projects and have practicality on a particular stream and improve their skills.

1.2 Project Overview/Specifications

Goal of the project:
The goal of this project is to provide project base learning options to the learners who are using online resources to learn any new technology.
Description:

The purpose of 'Aplicar' is to provide a platform to students to apply their skills to solve a real world problem.

Practicality is the key to stability and survival for a student! Every year,
thousands of students graduate from colleges with dreams and hope in their eyes for a secure future. Once they leave college, most get a real life check. Most of them are in shock over the competition. Others realize that they truly aren't even ready to face the competition. But if not through the education system, then how else are the students supposed to be prepared.
In order to increase their chances at a more promising future many do internships, take workshops or even do extra classes while they are still studying. But, they don't get support from colleges or schools for that either. Hey, compulsory attendance!
Today, everything has gone digital. But the education system has not matched the pace of change. Students don't get to choose what subjects they want to study. In fact, the education system decides what thousands of students are going to have to learn.
Hence, individuals are preferring online education because

- **I can pursue my passions**
- **I can focus on my work without distractions from my classmates**
- **I can move at my own pace**
- **I can learn with a schedule that meets my needs**

and having more options, but apart from these numerous advantages, lack of the practical knowledge of something is still the problem for a student.
The major cause of this, some students could not decide the use case or either they don't practice their skills in some project, which limits them to their theoretical knowledge.
To overcome this situation, a web based application can be developed which can connect learners with the community of developers and the experts. Where they can give the projects or a part of it to the learners and the project can be taken by the learners. The learners will act like volunteers so they can choose projects and work by their capabilities. The project work can be classified by their domains and the difficulty levels, volunteers can choose between projects by their interest, stream and the time duration.
Objectives: This web application is aimed to provide a free online platform where students can practice their learned things.

This achieves following –

- Better knowledge of the field.
- Industrial level project work.
- Better prepared for the world of work.

1.3 Hardware Specification

- Any processor that is SSE2(Streaming SIMD extensions 2) capable
- 4GB of RAM or above.
- Internet connectivity.

1.4 Software Specification

- Operating system: Windows 7 or above or Linux.
- Database: MySQL.
- Apache-tomcat version 9.0.
- Java 1.8.
- IDE: any of eclipse photon, NetBeans 8.2, IntelliJ idea.
- Microsoft Visio.
- Web browser (HTML5, CSS3 and javaScript5 supported).

Software	**Functionality**	**Use in Project**	**Why?**
MySQL	An open source free to use object-relational database	Used to store the user data, and the project submission files.	MySQL is a fast, reliable and stable open source database management system (RDMS – Relational Database Management System).
Java	Programming Language	Underlies most other code within the project	Java is secure, reliable and fast & free to download.
JavaScript	An object-oriented computer programming language commonly used to create interactive effects within web browsers.	An essential core software tool used in all browsers.	Very easy to learn. It is a scripting, lightweight Programming language, and it is a programmable code that can be embedded into

			HTML pages. This code can be performed by all web browsers. Old or modern.
Apache-tomcat	An open source implementation of Java Server pages and Java Servlet.	Used for communication between server and client side of web applications	Apache is HTTP Server and generally known as Apache. In the preliminary growth of the World Wide Web Apache (web server software) played an important role. An open community of developers Has designed & developed it by under the auspices of the Apache Software Foundation.
HTML	Hypertext markup language.	HTML embeds objects & images and it can be used to create Interactive forms.	HTML objects form the architecture of all websites. And it is the markup language used for creating web pages and any information that could be showed on a web browser
CSS	Cascading Style Sheets	Colors, fonts, positioning and styling of data has been controlled and taken care by CSS.	The exact content of the website can be searched by Spider of the engine when it scans thoroughly. Externally, CSS code is getting stored and it streamlines the XHTML code for faster and smooth Loading and working.

NetBeans	IDE	Used for powerful, multi language development environment	Freeware Great GUI builder, Great Ant integration, Great and CONSISTENT IDE with Great speed, Great Debugger, Great Profiler

2. Literature survey

2.1 Feasibility study

Contents –

1) Executive summery
2) Need analysis
3) Engineering & design

1. Executive summery –

- **Product description:** The purpose of ‘Aplicar’ is to provide a platform to students to apply their skills to solve a real world problem.
- **Target audience:** This application is for every student who is learning something and for the programmers and developers who have the lack of time to do their small tasks.
- **Risks:** We have undertaken following risks by perusing this project.
    - The popularity of the application may not transit among the targeted audience in the expected time.
    - The number of uploaded projects may be less than expected number.
- **Opportunities:** By doing this project our opportunities will be-
    - To provide a simple user interface to every user of the application.
    - To provide the good amount of options between projects to the students.

2. Need analysis:

While reviewing different domains, we found a problem in our education system which causes lack of confidence towards learned things in students that is the having less practical knowledge of the subject. Hence this application is aimed to provide students a way or a platform where they can choose their desired domain, technology to apply their skills.

3. Engineering:

- **Modules:** The application has 4 modules.
    - 1. Database design.
    - 2. Prototyping user interface.
    - 3. Coding (Back end)
    - 4. User interface design (Front end)

- **Module 1: Database design**

This module consists of user login and registration and all user's activities. It maintains the user's information and also user's files. It consists of six tables, which are used to store personal information of project manager, volunteers, and all the available domains and programming languages, and all the projects respectively and the other one is to maintain user's files and projects. The input to database for personal information is given by the user in registration page.
Module 1 itself having 4 phases of designing a database for this project. Which are as follows-

- **Conceptual design of database:** The analysis of data and requirements as been done here, rolls of the users, what information is needed from a new user which is acting as a volunteer or as a project manager, and what the source of the information is going to be.
- **DBMS software selection:** The software selection for all the operations is dependent on the use and cost of the project and also on the features the project provides. We chose *SQLyog community edition* for creation and performing all the operation of database.
- **Logical design:** At this phase the conceptual design of the database is translated into internal model which maps object in model to specific DBMC constructs. Its design components are tables, indexes, views, etc.
- **Physical design:** Physical database translates the logical data model into a set of SQL statements that define the database.

- **Module 2: Prototyping user interface**
  - **Why prototyping?** *Prototyping is a means of exploring ideas before you invest in them.* All experienced craftspeople and engineers create prototypes of their work before they build anything: Architects create models out of paper or cardboard, or with virtual reality tools. Aeronautic engineers use wind tunnels. Bridge builders create stress models. Software and Web designers create mock-ups of how users will interact with their designs. *We have used Adobe XD to prototype the User interface of the website.*

- **Module 3: Coding(the beck end of the project)**
  - This is the main module for this project, where all the server side programming will be done using the Java programming language.

    All the URL strings, and web pages are mapped in this module.

- **Module 4: User interface design(front end of the project)**
  - This is the front end of the project, which will be used by the users, the front end is developed by using HTML, CSS and JavaScript to make a real interactive web page from the prototype.

3. System analysis & design

3.1 Requirement specification

Contents –

- Introduction
- Overview
- Goals and scope
- Functional requirements
- Non-functional requirements
- External interface requirements
- Hardware Interface
- Communication interface

- **Introduction –**

Can you imagine someone teaching you to swim or drive a vehicle, within four walls of a classroom? It is impossible!! You have to get into the water to learn swimming and you have to be out on the road to learn driving. Some subjects are skill based and practice oriented. Theoretical knowledge of skill- based subjects needs to be supported by practice. Subjects like teaching and engineering are skill based. In these subjects, practical knowledge is more important than theoretical knowledge. Practical work includes experiments in laboratories, study tours, projects, assignments etc. the advantages of practical work are unmatched. Getting theoretical knowledge has no value until students can apply it for practical purposes. So, this application is aimed to encourage the practical learning which supports their theoretical knowledge, because theoretical knowledge is incomplete without the practical skills and the practical knowledge is incomplete without the theoretical knowledge of the system.

- **Overview –**

Today, everything has gone digital. But the education system has not matched the pace of change. Students don't get to choose what subjects they want to study. In fact, the education system decides what thousands of students are going to have to learn.
Hence, individuals are preferring online education because they **can pursue their passions, they can focus on their work without distractions from any classmates, they can move at their own pace, they can learn with a schedule that meets their needs** and having more options, but apart from these numerous advantages, lack of the practical knowledge of something is still the problem for a student.
The major cause of this, some students could not decide the use case or either they don't practice their skills in some project, which limits them to their theoretical knowledge.
To overcome this situation, a web based application can be developed which can connect learners with the community of developers and the experts. Where they can give the projects or a part of it to the learners and the project can be taken by the learners. The learners will act like volunteers so they can choose projects and work by their capabilities. The project work

can be classified by their domains and the difficulty levels, volunteers can choose between projects by their interest, stream and the time duration.

- **Goals –**

By doing this project our goal is to provide a platform where they can choose between varieties of projects of their domain.
Where developers and project workers can share their part of work to manage their busy schedule.
Completed projects can be optionally rated.

- **Functional requirements –**

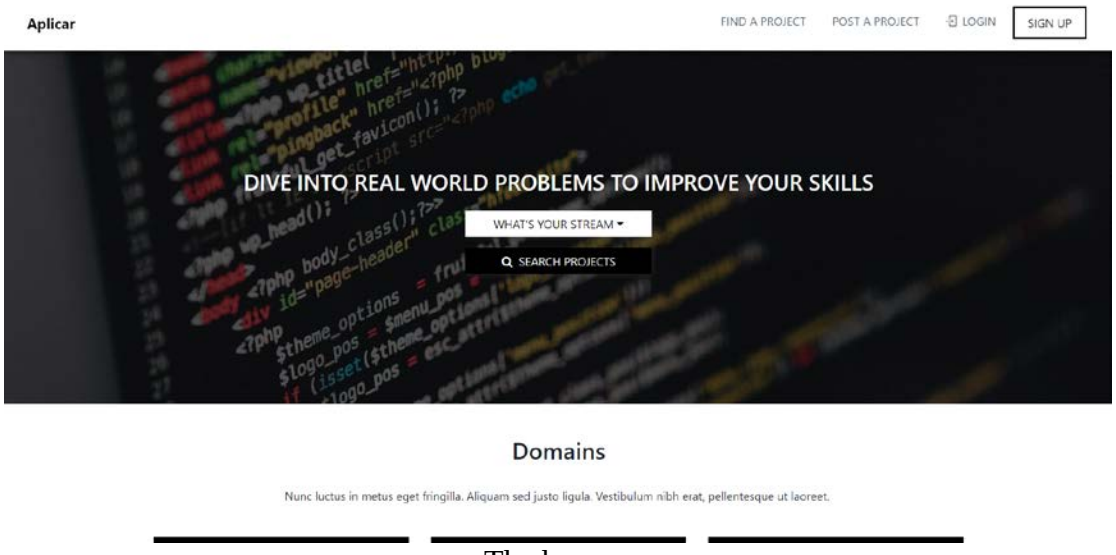
1) Registration is offered to new user. Then a registered user logs into our site.
2) Project managers can see how many volunteers have taken their posted project and each volunteer's status.
3) Volunteers can see their previous and on-going projects.
4) Session based web page so users don't require to login every time.

- **Non-functional requirements –**

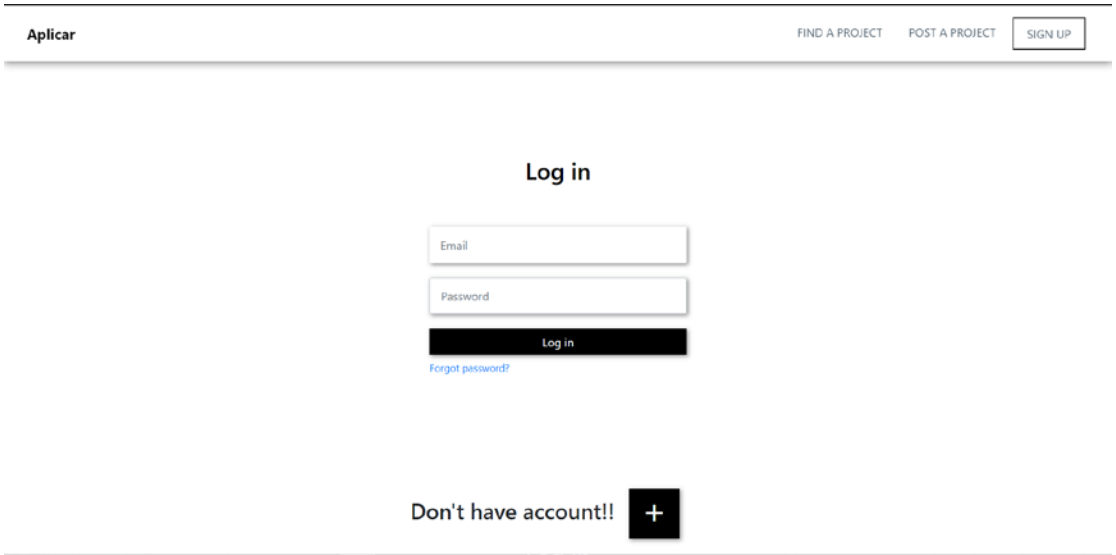
The web server must be able to handle and support multiple instance of application. The time between request and response should be less in case of applying filters into project categories. Minimum time should be taken by the application to display preview the web pages developed by the user.

- **External interface requirements –**

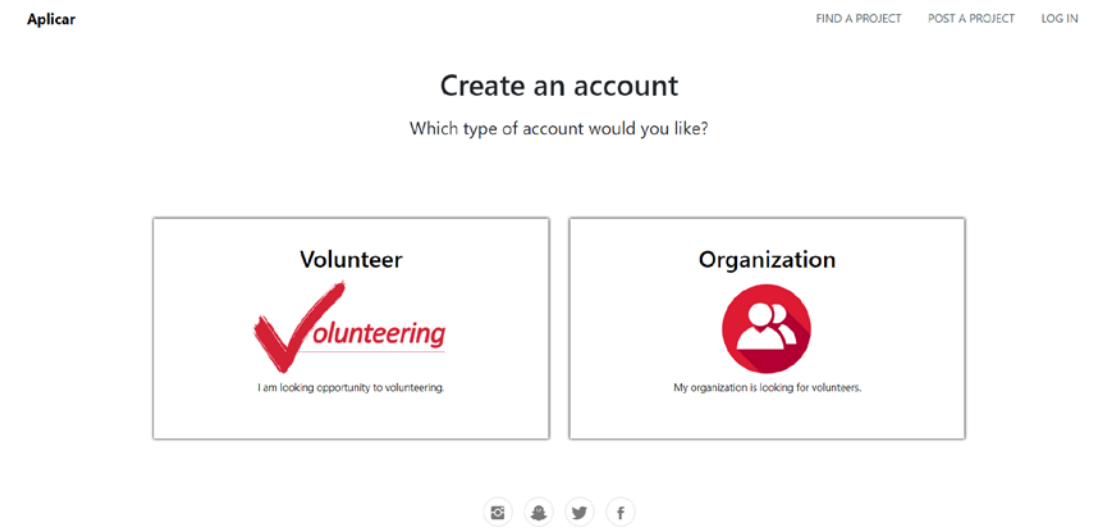
Look and feel of web pages with which users going to interact will look as follows –



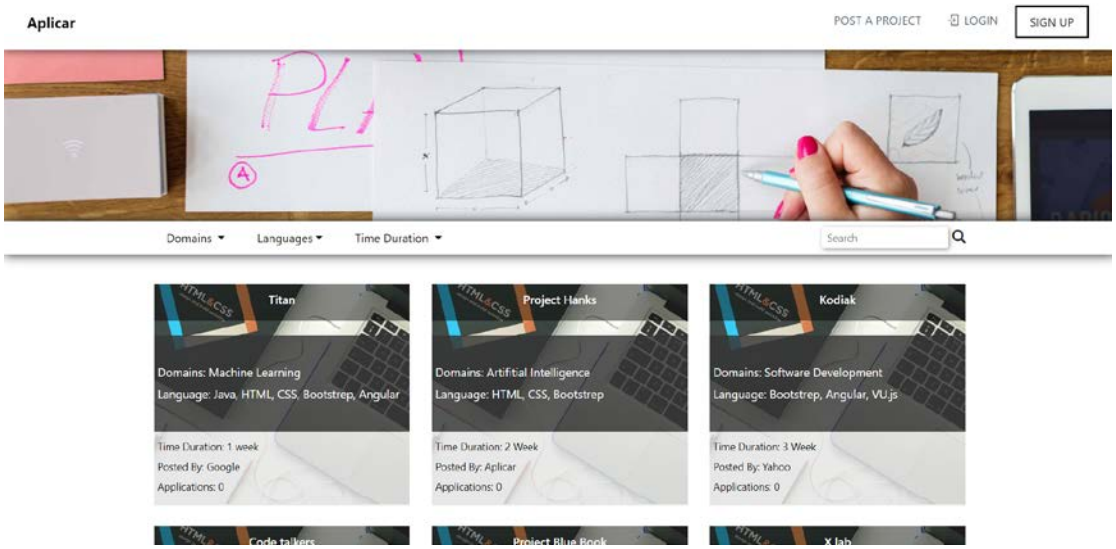
The home page



Login page



Sign up page



Projects home page

- **Hardware interface –**

  TCP/IP:
  It is a reliable connection oriented protocol that allows byte streaming originating on one machine to be delivered without any error on any other machine in the network. It fragments the incoming byte stream into discrete messages and parses each one on to the internet layer. At the destination, the receiving TCP process reassembles received messages into the output stream. TCP also handles the flow control to make sure a fast sender cannot swamp a slow receiver with more messages than it can handle.

- **Communication Interface –**

  HTTP:
  Hypertext transfer protocol (HTTP) is a method used to transfer or convey information on the World Wide Web. Its original purpose was to provide the way to publish and retrieve HTML pages.

Development of HTTP was coordinated by the World Wide Web Consortium (W3C) and Internet Engineering Task Force (IETF) culminating in the publication of RFCs, most notably RFC 2616, which defines HTTP/1.1 the version of HTTP in common use today. HTTP is a request/response protocol between clients and servers. The originating client, such as web browser, spider or other end user tool, is referred to as a user agent. The destination server which stores or creates resources such as HTML files and images is called the origin server. In between the user agent and origin server, any is several intermediaries such as proxies, gateways, tunnels. An HTTP client initiates a request by establishing Transmission Control Protocol (TCP) connection to a particular port on a remote host. An HTTP server listening on that port waits for the client to send a request message. Upon receiving request, the server sends back a status line, such as “HTTP/1.1 200 OK” and a message of its own, the body of which is perhaps the request file, an error message, or some other information. Resources to be accessed by HTTP are identified using Uniform Resource Identifiers (URIs) (or, more specifically, URLs). Using the HTTP: or HTTPS URI schemes.

Find-projects.jsp

Login.jsp

Signup.jsp

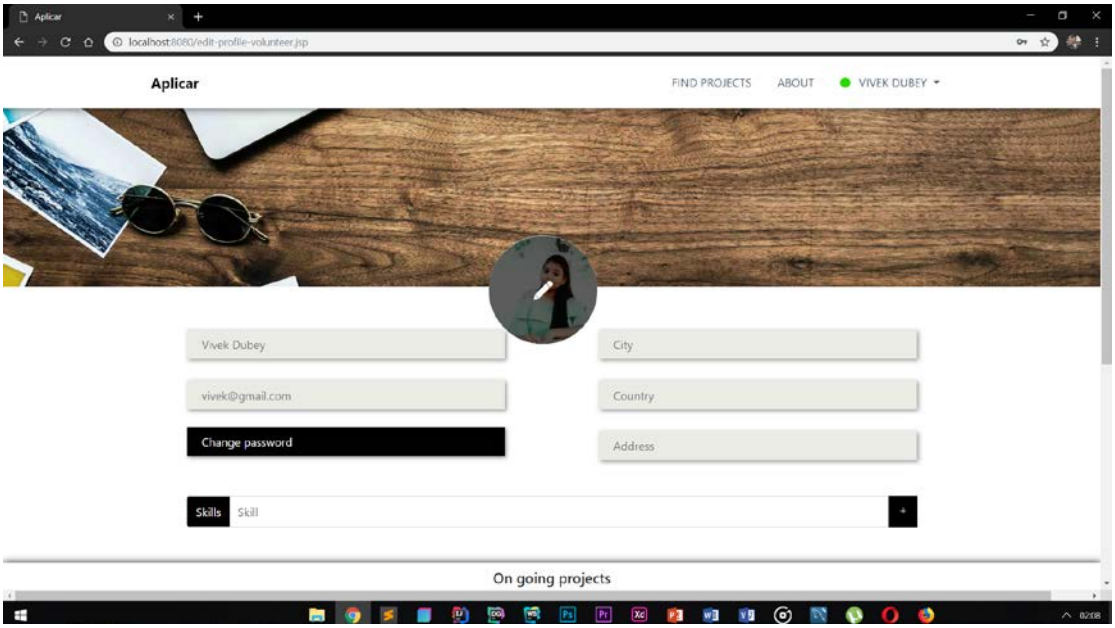
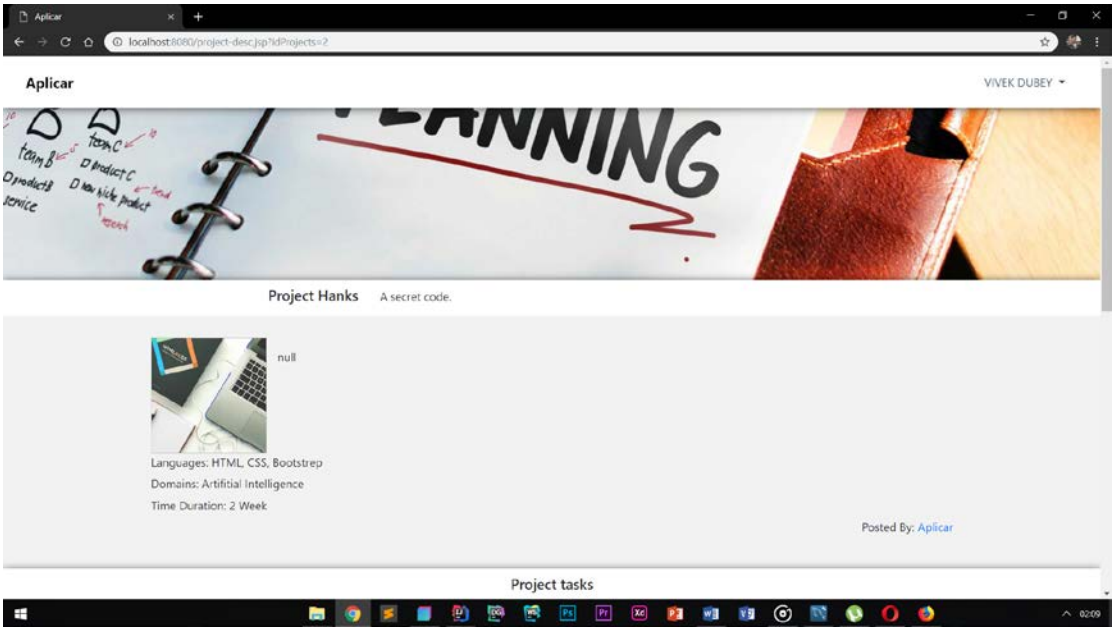
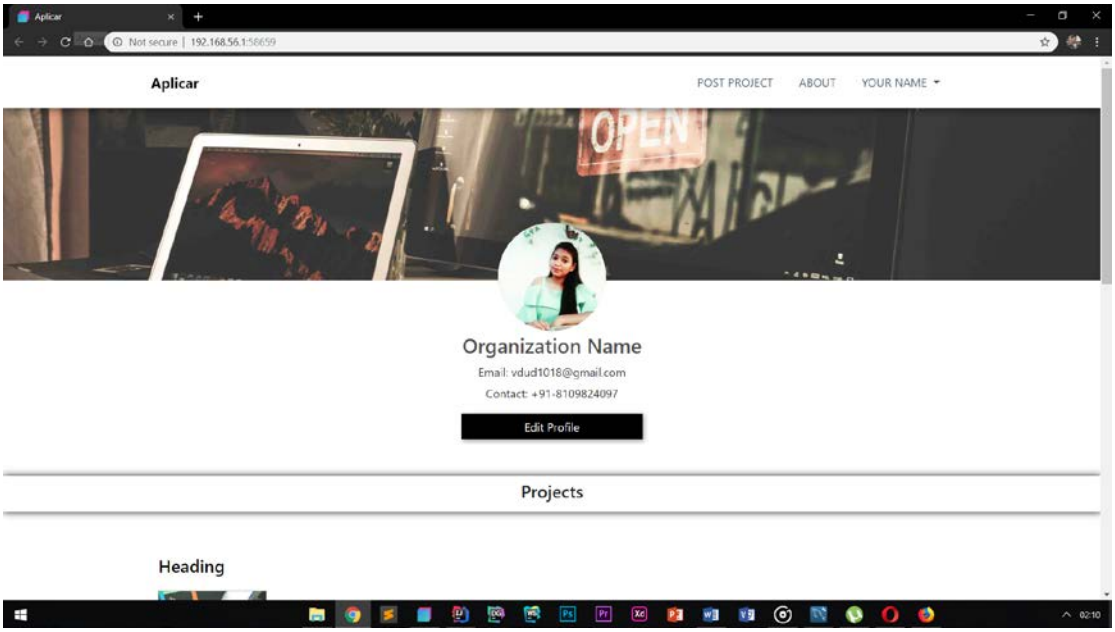
Signup-volunteer.jsp



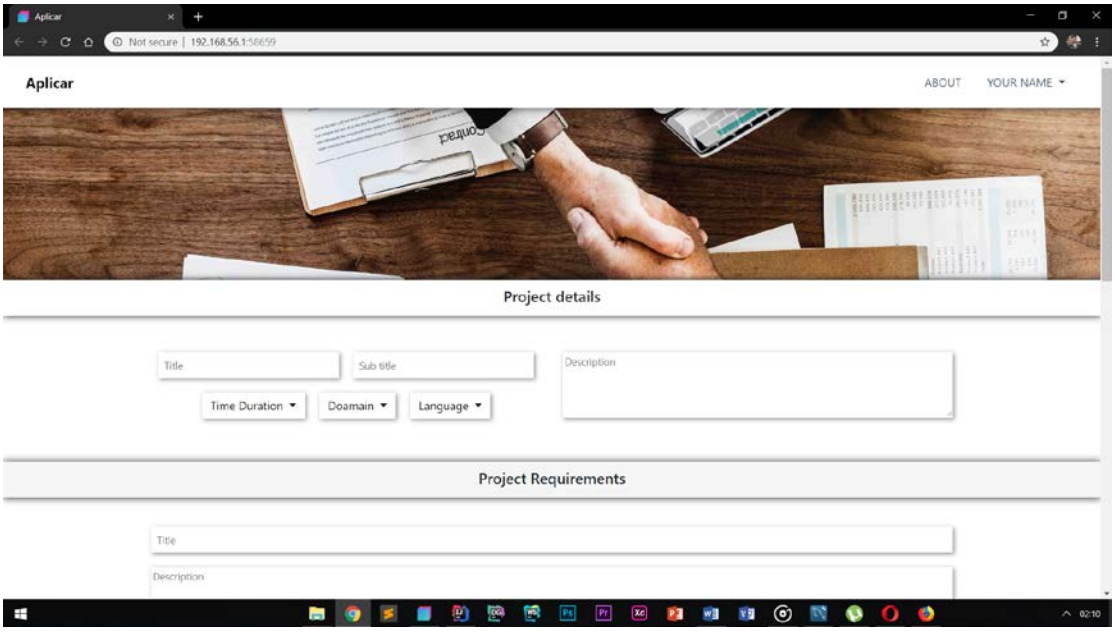
Edit-profile-volunteer.jsp



Project-desc.jsp



Org-profile.jsp



Post-project.jsp

5. Conclusion

By this application we can provide practical knowledge to the learners and also can save the entire cost for a project for some non-profitable organization.
